11. Batch Class Requirement:

- Create a Batch class to update all the Applications status Checkbox to Inactive

Run above batch class day 1 on every month.

- Send success and failed record id.

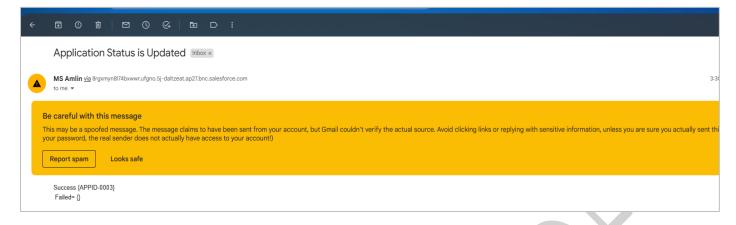

Code→

```
global class AppliStatusBatchClass implements Database.Batchable<SObject>, Database.Stateful{
    SET<String> successIdSet = new SET<String>();
    SET<String> failedIdSet = new SET<String>();
    global Database.QueryLocator start(Database.BatchableContext BC){
        return Database.getQueryLocator('select id, Name, First_Name__c, Last_Name__c, CreatedDate,
Active_Applicant__c, Asset_Products__c from Applicant_Details__c where CreatedDate = LAST_MONTH and
Active_Applicant__c = true');
    global void execute(Database.BatchableContext BC, List<Applicant_Details__c> appList){
        if(!appList.isEmpty()){
            for(Applicant_Details__c objApp : appList){
                if(String.isBlank(objApp.Asset_Products__c)){
                    objApp.Active_Applicant__c = false;
                Database.SaveResult[] result = Database.update(appList, false);
                Integer index=0;
                for(Database.SaveResult sr: result){
                    if(sr.isSuccess()){
                        System.debug('Succes = '+appList[index].Name);
                        successIdSet.add(appList[index].Name);
                        index++;
                    eLse{
                        System.debug('Failed = '+appList[index].Name);
                        failedIdSet.add(appList[index].Name);
                        index++;
                    System.debug('Success= '+successIdSet);
                    System.debug('Failed = '+failedIdSet);
    global void finish(Database.BatchableContext BC){
       Messaging.SingleEmailMessage mail = new Messaging.SingleEmailMessage();
       mail.setToAddresses(new String[] {'waradepranav99@gmail.com'});
       mail.setSenderDisplayName('MS Amlin');
       mail.setSubject('Application Status is Updated');
       mail.setPlainTextBody('Success '+successIdSet+'\n Failed= '+failedIdSet);
       Messaging.sendEmail(new Messaging.SingleEmailMessage[] { mail });
    }
```

Email send System Admin.

- Write Test Class.

Batch Class→

```
global class BatchClassAppStatus implements Database.Batchable
global Database.QueryLocator start(Database.BatchableContext BC){
    return Database.getQueryLocator('select id, First_Name_c, Last_Name_c,Asset_Products_c,
Active_Applicant_c from Applicant_Details_c where Active_Applicant_c = true');
}
global void execute(Database.BatchableContext BC, List<Applicant_Details_c> appList){
    if(!appList.isEmpty()){
        for(Applicant_Details_c objApp : appList){
        if(String.isBlank(objApp.Asset_Products_c)){
            objApp.Active_Applicant_c = false;
        }
    }
    Database.update(appList, false);
}
global void finish(Database.BatchableContext BC){
}
```

Test Class→

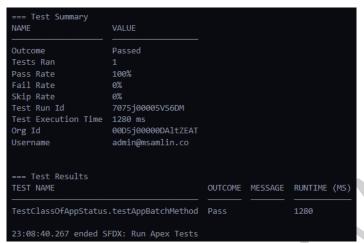

```
@isTest(seeAllData=false)
public class TestClassOfAppStatus{
   @isTest
   public static void testAppBatchMethod(){
        List<Applicant_Details__c> appList = new List<Applicant_Details__c>();
       for(Integer i=1; i<=200; i++){</pre>
            Applicant_Details__c objApp = new Applicant_Details__c(First_Name__c='Shankar'+i,
Last_Name__c='Pratap'+i, Asset_Products__c= null, Active_Applicant__c = true);
            appList.add(objApp);
        if(!appList.isEmpty()){
            Database.insert(appList, false);
        Test.startTest();
            Database.executeBatch(new BatchClassAppStatus(), 200);
        Test.stopTest();
        List<Applicant_Details__c> actualAppList =[select id, First_Name__c, Last_Name__c, Active_Applicant__c,
Asset_Products__c from Applicant_Details__c where Active_Applicant__c=false];
        System.assertEquals(200, actualAppList.size());
```
